WHAT IS CLAIMED IS:

- 1. A method of performing PCR and separating one or more PCR products, the method comprising:
 - (i) mixing one or more PCR reaction components with a sieving medium to provide a PCR sieving medium, wherein the sieving medium comprises a polymer solution, which polymer solution comprises less than about 0.5% polymer; and
 - (ii) thermocycling the PCR sieving medium to produce one or more PCR products; and,
 - (iii) separating the one or more PCR products by flowing the one or more PCR products through the sieving medium.
- 2. The method of claim 1, wherein the polymer solution comprises less than about 0.4% polymer.
- 3. The method of claim 2, wherein the polymer solution comprises about 0.35% polymer or less.
- 4. The method of claim 1, wherein the polymer solution comprises acrylamide.
- 5. The method of claim 4, wherein the acrylamide comprises linear acrylamide, polyacrylamide, polydimethylacrylamide, or polydimethylacrylamide/coacrylic acid.
- 6. The method of claim 1, wherein the polymer solution comprises agarose, methyl cellulose, polyethylene oxide, hydroxycellulose, or hydroxy ethyl cellulose.
- 7. The method of claim 1, wherein the one or more PCR reaction components comprise one or more of: a thermostable DNA polymerase, a plurality of nucleotides, a nucleic acid template, a primer which hybridizes to the nucleic acid template, or Mg⁺⁺.
- 8. The method of claim 1, comprising mixing the PCR reaction components with the sieving medium in a microfluidic channel.

- 9. The method of claim **8**, further comprising separating the one or more PCR products by flowing the one or more PCR products through the sieving medium in the microfluidic channel.
- 10. The method of claim 9, wherein separating comprises electrophoretically separating.
